Bacterial Degradation Of Crude Oil Strain isoSS-01 belong to a collection of hydrocarbon-degrading bacteria hold at IAMC-Messina, strains isoSS-2 and iso-SS03 were isolated from natural seawater from crude oil enrichments in previously research. All strains used in this study were isolated from natural seawater from crude oil enrichments. Biodegradation of crude oil by individual bacterial ... A crude oil was degraded in a 21-day laboratory experiment by a culture of four aerobic bacteria isolated from an oil-contaminated soil. The progress of the experiment was measured by the changes induced in the chemical composition of the oil fraction boiling above

270°C. Bacterial degradation of crude oil: Comparison of field ... The degradation percentage of crude oil by the three bacterial strains and their mixture after incubation at 22°C for 7, 14, 21, and 28 days was demonstrated in Table 4. The results demonstrated that the degradation percentage increased with increasing the incubation time and reached its maximum after 28 days of incubation and the maximum ... Bacterial Biodegradation of Crude Oil Using Local Isolates At 1% crude oil concentration, the mixed bacterial consortium degraded a maximum of 77% of the crude oil. This was followed by 69% by *Pseudomonas* sp. BPS1-8, 64% by *Bacillus* sp. IOS1-7, 45% by *Pseudomonas* sp. HPS2-5, and 41% by

BPS2-6. Biodegradation of Crude Oil by Individual Bacterial ... Microbial degradation of petroleum hydrocarbons is one of the major practices in natural decontamination process. The present study investigated about the isolation of bacteria from crude oil contaminated site and gravimetric analysis of degradation in which, two bacterial isolates formed maximum clearing zone on mineral salt medium. Bacterial Degradation of Crude Oil by Gravimetric Analysis Three bacterial formulations demonstrated high efficiency to degrade resins (max 24.18%) and asphaltene (max 56.17%), and they decreased the viscosity of crude oil to varying degrees at 40 °C (max

26.47%). Bacterial degradation of crude oil using solid ... The effects of crude oil concentrations on the growth of individual bacterial cultures and the mixed bacterial consortium, and crude oil degradation, were tested. At 2.5% BH crude oil, the mixed bacterial consortium showed 70% degradation followed by 67% at 5%, 63% at 7.5% and 52% at 10% (Table 2). Towards efficient crude oil degradation by a mixed ... Heavy crude oil spillage is even more difficult to remediate, due to its hydrophobic, toxic constituents, and its partial or incomplete degradation leads to even more toxic intermediates in the affected environment. Harmful effects of crude oil spills are often observed in marine mammals, birds, and land-

Explore the latest full-text research PDFs, articles, conference papers, preprints and more on METHANOTROPHIC BACTERIA. Find methods information, sources, references or conduct a literature review ... Methanotrophic Bacteria and Petroleum Degradation agar (for bacteria), 1.2% agar (for fungi). Crude oil (2%) sterilized using 0.45µm Millipore filter served as carbon source. The MS-oil medium for crude oil degrading bacteria and crude oil degrading fungi were then incubated at $28^{\circ}\text{C} \pm 2^{\circ}\text{C}$ respectively for 14 and 21 days.
