Mitosis And Meiosis Pre Lab Introduction: All cells come from preexisting cells and eukaryotic cells must undergo mitosis in order to form new cells. The replication of a cell is part of the overall cell cycle (Figure 1) which is composed of interphase and M phase (mitotic phase). M phase, which consists of mitosis and cytokinesis, is the portion of the cell cycle where the cell divides, reproducing itself. Lab 9: Mitosis and Meiosis - Biology LibreTexts Compare and contrast mitosis and meiosis. Mitosis: Equal division/ occurs in somatic cells/ one karyokinesis and cytokinesis/ prophase is not further divided/ crossing over doesn't happen/ one cell produces two daughter cells by the end of meiosis/ chromosome number of each daughter cell is equal to the parental cells/ daughter cells are identical to the parent cell Meiosis: Reduction division/ occurs in germs cells only/ two karyokinesis and one cytokinesis/ prophase one is further ... Compare mitosis and meiosis with respect to each of the following. AP Lab 3 Sample 3 Mitosis - BIOLOGY JUNCTION For organisms to grow and reproduce, cells must divide. Mitosis and meiosis are both processes of cell division, but their outcomes are very different. In this laboratory, you will: Study the process of mitosis in plant and/or animal cells using slides of onion root tips or whitefish blastulae. Review the process of meiosis in a simulation activity with beads, and then investigate crossing over during meiosis in a fungus.
